

IN THE CLAIMS:

Kindly replace the claims of record with the following full set of claims:

1. (Original) A method for playing a content, comprising the steps:
reading a pre-stored content which include information relevant to a downloaded content;
detecting available bandwidth;
sending a request for downloading the downloaded content according to the information relevant to the downloaded content, wherein the request includes the information of the bandwidth;
receiving the downloaded content according with the detected bandwidth; and
playing the downloaded content combined with the pre-stored content.
2. (Original)The method according to claim 1, wherein the request includes a URL of a website on which the downloaded content are stored.
3. (Original)The method according to claim 1, wherein the detecting step is arranged for detecting throughput of effective information transmitted within a specific period.
4. (Original) A method for playing the content, comprising the steps:
reading a pre-stored content which include information relevant to a downloaded content;
detecting available bandwidth;
selecting relevant quality of the downloaded content according to the detected bandwidth information and the information relevant to the downloaded content;
sending a request for downloading the downloaded content according to the information relevant to the downloaded content, wherein the request includes the relevant quality;
receiving the downloaded content according to the relevant quality; and
playing the downloaded content combined with the pre-stored content.

5. (Original)The method according to claim 4, wherein the information relevant to the downloaded content includes an ID of an optical disk, an URL of a website on which the downloaded content are stored and a quality menu of the downloaded content, wherein the quality menu includes a plurality of quality options for the downloaded content.
6. (Original)The method according to claim 4, wherein the detecting step is arranged for detecting throughput of effective information transmitted within a specific period.
7. (Original)A method for playing the content, comprising the steps:
 - reading a pre-stored content which include information relevant to a downloaded content;
 - detecting available bandwidth;
 - selecting relevant quality of the downloaded content according to the detected bandwidth information and the information relevant to the downloaded content;
 - sending a request for downloading the downloaded content according to the information relevant to the downloaded content, wherein the request includes the relevant quality;
 - receiving the downloaded content according to the relevant quality; and
 - playing the downloaded content combined with the pre-stored content.
8. (Original)The method according to claim 7, wherein the information relevant to the downloaded content includes an ID of an optical disk, an URL of a website on which the downloaded content are stored.
9. (Original)The method according to claim 8, wherein the detecting step is arranged for detecting throughput of effective information transmitted within a specific period.
10. (Original) A device for playing a content, comprising:

a reading means for reading a pre-stored content which include information relevant to a downloaded content;

a detecting means for detecting available bandwidth;

a sending means for sending a request for downloading the downloaded content according to the information relevant to the downloaded content, wherein the request includes the information of the bandwidth;

a receiving means for receiving the downloaded content according with the detected bandwidth; and

a playing means for playing the downloaded content combined with the pre-stored content.

11. (Original) The device according to claim 10, wherein the request includes a URL of a website on which the downloaded content are stored.

12. (Original) The device according to claim 10, wherein the detecting means are arranged for detecting throughput of effective information transmitted within a specific period.

13. (Original) A device for playing the content, comprising:

a reading means for reading a pre-stored content which include information relevant to a downloaded content;

a detecting means for detecting available bandwidth;

a selecting means for selecting relevant quality of the downloaded content according to the detected bandwidth information and the information relevant to the downloaded content;

a sending means for sending a request for downloading the downloaded content according to the information relevant to the downloaded content, wherein the request includes the relevant quality;

a receiving means for receiving the downloaded content according to the relevant quality; and

a playing means for playing the downloaded content combined with the pre-stored content.

14. (Original) The device according to claim 13, wherein the information relevant to the downloaded content includes an ID of an optical disk, an URL of a website on which the downloaded content are stored and a quality menu of the downloaded content, wherein the quality menu includes a plurality of quality options for the downloaded content.

15. (Original) The device according to claim 13, wherein the detecting means are arranged for detecting throughput of effective information transmitted within a specific period.

16. (Original) A device for playing the content, comprising:

a reading means for reading a pre-stored content which include information relevant to a downloaded content;

a detecting means for detecting available bandwidth;

a selecting means for selecting relevant quality of the downloaded content according to the detected bandwidth information and the information relevant to the downloaded content;

a sending means for sending a request for downloading the downloaded content according to the information relevant to the downloaded content, wherein the request includes the relevant quality;

a receiving means for receiving the downloaded content according to the relevant quality; and

a playing means for playing the downloaded content combined with the pre-stored content.

17. (Original)The device according to claim 16, wherein the information relevant to the downloaded content includes an ID of an optical disk, an URL of a website on which the downloaded content are stored.

18. (Original) The device according to claim 17, wherein the detecting means are arranged for detecting throughput of effective information transmitted within a specific period.
